**ABSTRACT Objective:** To study the clinical efficacy of bronchovaxom capsule unite Shenmai Injection in the treatment of children with bronchial asthma and its effect on the serum levels of IL-4, hs-CRP, Ang-2. **Methods:** 120 cases of children with bronchial asthma who were treated from March 2015 to March 2015 were selected as research objects and divided into the observation group and the control group according to different treatment. The control group was given conventional treatment, while the observation group was treated with bronchovaxom capsule combined with Shenmai injection, both groups of children were treated for three courses. After treatment, the clinical efficacy, changes of PEF, FEV1, T lymphocytic subgroup, serum IL-4, hs-CRP, and Ang-2 before and after treatment were compared between two groups. **Results:** After treatment, the total effective rate of observation group (91.7%) was significantly higher than that of the control group (73.3%) (P<0.05), the serum IL-4, hs-CRP, and Ang-2 levels of both groups were significantly decreased than those before treatment, while the PEF and FEV1 were obviously elevated (P<0.05). Compared with the control group, the serum IL-4, hs-CRP, and Ang-2 levels were significantly lower in the observation group, and the levels of PEF and FEV1 were significantly higher(P<0.05). After treatment, the CD3<sup>+</sup>, CD4<sup>+</sup> levels of observation group were significantly higher than those of the control group, whereas the CD8<sup>+</sup> level and CD4<sup>+</sup>/CD8<sup>+</sup> ratio were significantly decreased (P<0.05). **Conclusion:** Bronchovaxom capsule combined with shenmai injection could effectively enhance the clinical curative effect, improve the pulmonary function in the treatment of children with bronchial asthma, which might be related to the reduce of serum IL - 4, hs CRP, Ang - 2 levels.

有可能威胁患儿的生命<sup>[1,2]</sup>。有关文献显示<sup>[3]</sup>炎性因子水平的增加和免疫功能紊乱在支气管哮喘的发生发展中具有重要作用。临幊上通常会使用糖皮质激素作为主要药物治疗支气管哮喘,但效果不尽如人意,对改善患儿免疫水平的效果较差,从而使病情反复发作。

近年来,随着对免疫失衡在支气管哮喘发生、发展中作用研究的不断深入,人们发现免疫调节剂治疗支气管哮喘具有重要作用<sup>[4]</sup>。泛福舒胶囊为一种糖蛋白制剂型的免疫调节剂<sup>[5]</sup>,多应用于急性呼吸道感染的治疗,疗效显著,但其在儿童支气管哮喘治疗的应用较少。参麦注射液为中药免疫调节剂,内含红参、麦冬,可有效提高人体免疫机能,抑制炎症反应,有效预防及治疗支气管哮喘<sup>[6]</sup>。因此,本研究主要探讨了泛福舒胶囊联合参麦注射液治疗儿童支气管哮喘的临床疗效及其可能机制,旨在为儿童支气管哮喘的临床治疗提供更多的参考依据,

现报道如下。

## 2.5 两组患儿不良反应发生情况的比较

治疗中,两组均未发生严重的不良反应。

## 3 讨论

支气管哮喘为临床多见病,特征以呼吸道高反应性为主,好发于儿童,发病率可达 3%左右,且近年来有上升趋势<sup>[9,10]</sup>。研究表明<sup>[11-13]</sup>,多种炎症因子以及细胞因子参与支气管哮喘的发生发展,各种类型炎症因子的释放与不同气道炎症细胞的浸润是此疾病共同的病理学特征<sup>[14]</sup>。

糖皮质激素是临床常用的抗炎反应药物,可有效改善患者局部的炎性反应,可通过减少微血管的渗漏达到改善气道阻塞

症状的目的<sup>[15]</sup>,本研究结果显示:患儿经常规治疗后其临床总有效率仅为 73%左右,且糖皮质激素无法改善患儿免疫功能,并存在一定的不良反应,患儿的 T 淋巴细胞水平并无明显改善。泛福舒胶囊由多种细菌溶解产物组成的一种免疫调节剂,对 Th1/Th2 的失衡状态具有显著的改善效果,利于支气管哮喘的治疗<sup>[16]</sup>;此外可通过诱导机体产生自主性的免疫应答,发挥免疫保护、改善免疫机能的作用<sup>[17]</sup>。据国外相关文献报道<sup>[18,19]</sup>,细菌溶解产物可有效改善儿童支气管哮喘的免疫水平。参麦注射液中所含的人参麦冬可提高机体器官抗应激能力以及免疫功能<sup>[20]</sup>。研究表明参麦注射液可通过调理 T 淋巴细胞增殖从而增加机体免疫功能<sup>[21]</sup>。本研究结果显示患儿经泛福舒胶囊联合

参麦注射液治疗后总有效率显著提高。

在支气管哮喘发作时, Th1/Th2 比例出现失衡<sup>[22]</sup>。IL-4 是 Th2 细胞产生的一种多效应细胞因子, 在支气管哮喘患者中其水平明显增高, 有关研究报道<sup>[23]</sup>血清 IL-4 与血清中嗜酸粒细胞存在正比关系, 与气道高反应性等炎症反应有关; 此外, IL-4 可促进 IgE 的合成, 而 IgE 可影响机体免疫应答及变态反应<sup>[24]</sup>, 说明 IL-4 水平的升高可能是发生气道重塑的重要机制。患儿通过联合治疗后血清 IL-4 水平显著降低, 与国外相关文献结论一致<sup>[25]</sup>, 提示泛福舒胶囊与参麦注射液均可有效改善机体 Th1/Th2 失衡。对于支气管哮喘患者而言, 不仅存在局部的炎症, 同时伴随全身的炎症反应。hs-CRP 是一种典型的系统性炎症标准物, 在正常情况下呈低水平表达, 一旦机体出现急性炎症、创伤、肿瘤等情况时其水平会迅速增加<sup>[26]</sup>。本结果显示: 患儿在联合治疗后其血清 hs-CRP 水平明显降低, 基本趋于正常水平, 同时 CD3<sup>+</sup>、CD4<sup>+</sup> 水平显著升高, CD8<sup>+</sup> 水平及 CD4<sup>+</sup>/CD8<sup>+</sup> 比值显著降低, 说明泛福舒胶囊与参麦注射液可有效改善患者炎症反应。

Ang-2 是肾素 - 血管紧张素系统的主要活性物质, 可有效控制血压以及调节水盐代谢, 同时具有促进细胞增殖和局部组织纤维化的作用, 参与机体炎症相关疾病的发生发展<sup>[27]</sup>。研究表明 Ang-2 在支气管哮喘患者中其血清水平显著升高<sup>[28]</sup>; Kim M 等研究发现使用 Ang-2 拮抗剂可抑制哮喘气道重塑, 减低气管道高反应<sup>[29]</sup>。本研究结果显示, 患儿治疗后血清 Ang-2 水平显著降低, 我们认为泛福舒胶囊与参麦注射液可能通过调节 Th1/Th2 平衡从而发挥其作用。

综上所述, 泛福舒胶囊联合参麦注射液治疗儿童支气管哮喘可有效提高其临床疗效, 改善其肺功能, 可能与其显著降低患儿血清 IL-4、hs-CRP、Ang-2 水平有关。
